

Mathematial Symbols

Dylan Saracco

October 1, 2016

1 Introduction

This document will include some math

1.1 Math Formulas

Mathematical equations can be created inline as $5 * 4 = 20$, and can include a number of different math symbols, such as $7 \leq 10$ is true

You can also put your equations on a seperate line as

$$5^2 = 25$$

to call out the formula.

1.2 Float: Equations

My first result is shown in Equation 1, which will show the number of minutes in a day.

$$24 * 60 = 1,440 \tag{1}$$

There are a lot of other interesting math symbols that I can learn, as shown in Equation 2.

$$7^4 + 6 * 17 \geq 13 \cup X \alpha 13 \exists \rightarrow \textit{nonsense} \tag{2}$$

2 Conclusion

And this was a brief primer on math in \LaTeX .
